Buying a new mattress can be a headache because it's difficult to separate the marketing hype from a mattress's attributes.

"There are so many mattresses out there that claim a layer of this and a layer of that, so you might think you're getting a superior product," says Christopher Regan, who oversees CR's mattress tests. "Our testing separates the good mattresses from the subpar."

To make those distinctions, Consumer Reports gauges firmness and measures precisely how much support each mattress provides to people of different sizes, whether they sleep on their back or on their side.

Below, CR members can read ratings and reviews of top-rated picks from each of the three types of mattresses we test: adjustable air, innerspring, and foam.

At CR we buy and test queen-size mattresses from well-known brands such as Beautyrest, Sealy, Serta, Stearns & Foster, and Tempur-Pedic, and from relatively new players including Avocado, Casper, Leesa, Reverie, Tuft & Needle, and more.

Using lab equipment and human subjects, we evaluate how well a mattress supports the body for both back and side sleepers, how easily sleepers can shift their weight without disturbing a partner, and how well the mattress keeps its shape over time.

To simulate the typical eight- to 10-year useful life span of a mattress, we conduct a test in which a 308-pound roller is pushed over each model 30,000 times.

You'll find two new scores in our mattress ratings—for comfort and owner satisfaction—that are based on data from our recent surveys on CR members' experiences with more than 74,000 mattresses. We asked members to rate the comfort of their mattress, and used the data to generate ratings by brand and type of mattress. Owner satisfaction is based on a member's overall judgement of such factors as firmness/softness, value, quality of sleep, and more.

Read on for the details on 11 of CR's top-rated mattresses. You can also browse our mattress buying guide and mattress ratings for even more options.
